Market Rank Over Time

Country Canada Mexico United States

United States has held the #1 revenue rank in every month since 2022

No rank changes occurred — Canada and Mexico maintained #2 and #3 throughout

2025 growth cooled in Canada (-6.0%) and US (-6.8%), while Mexico kept climbing (+22.6%) — worth watching whether this is a plateau or a blip

Mexico entered almost entirely online (Amazon + Shopify) — Canada and United States built a full 4-channel mix from the start. This is the market-entry pattern worth testing in UAE, UK, and Saudi Arabia.

CAC by Platform

Amazon Ads costs the most per acquisition (\$24.88) but drives the highest return — Google Ads and Meta Ads perform in near lock-step with each other, both around \$16 CAC.

What influences IsRepeatCustomer to be

Repeat

 ?

Repeat Rate by Channel

Repeat purchase rate holds steady around 42–43% across every channel and segment — no single acquisition factor stands out as a strong predictor. This likely reflects timing: many customers were acquired recently and haven't yet had a full window to reorder (a cohort-maturity effect worth correcting for in a future iteration).

3.94%

Conversion Rate

\$0.76

CPC

Acquisition Funnel

Conversion Rate by Platform

It takes ~47M impressions to generate ~27,500 conversions — a 0.06% impression-to-order rate. The biggest drop-off is impression-to-click (1.49% CTR); conversion rate holds steady near 4% across all platforms once a click happens. Getting seen efficiently, not converting clicks, is the funnel's tightest constraint.

Key influencers

What influences Market Attractiveness Score to

Increase

 ?

Target vs. Established Markets

The signal: UAE and UK score nearly identically (73.2 / 73.9), but for different reasons — the UAE wins on disposable income (6.95x driver), the UK on established e-commerce penetration. Saudi (57.9) lags on import-duty drag (2.6x). **Entry sequencing should follow the score, not the map.**

Year-1 ROI

Cumulative Cash Flow — Break-Even Curve

The Decision

At \$300K spend and \$25 CAC, the market pays back in 5.6 months and returns 116% in year one.

The lever that matters is CAC, not budget. Doubling spend doubles both cost and return — break-even timing doesn't move. **But push CAC from \$25 to \$50 and payback slips past 11 months, with ROI collapsing from 116% to 8%.**

Infused Honey

Highest-Return Product Line

Margin vs Returns — Quality Quadrant

Return Rate by Subcategory

The Quality Check

Infused Honey shows the highest return rate (1.1%), but its strong 61% margin absorbs the hit — it's still a healthy line.

The real watch item is **Dark Maple Syrup**: at 54.9% it carries the thinnest margin of any product *and* above-average returns. It has no margin cushion to absorb the returns it's generating.

→ **Prioritise Dark Maple's return driver — it's where returns actually erode profit, not where the rate is simply highest.**

Margin vs Returns — Quality Quadrant

Returns Decomposition — Where Returns Concentrate

The Predictive Verdict

Retail leads the health ranking (83.2) — zero commission, strong margin, low returns — making it the safest channel to scale. Amazon ranks last (43.5): best per-unit margin, but its 15% fee and thin volume sink it.

→ Scale Retail · fix Shopify's return rate · reprice or reposition Amazon.
